BAKTAT
GERMANY
TOKEN

BAKTAT utilizes the benefits of farming by summarizing all users' deposits into profits.

Your money farm!

BAKTAT FARM has the perfect strategy for you to profit in the agricultural business without the need to buy farms, equipment and cattle.

BAKTAT farm will do the hard and boring work for you, with individual agricultural projects!

Get a passive income with every buy and sell transaction of BAKTAT token

1. Introduction

The brand BAKTAT exists since 1991 and has an already existing network of manufacturers, suppliers and end customers.

The goal is to use the blockchain to develop an ecosystem that allows customers to use their BAKTAT Germany Token to participate in agricultural projects in many countries around the world that already exist or will be started by purchasing farmland.

Through the planting and management of the products, participants can be involved now and in the future by using their BAKTAT Germany tokens. The Token reflects the value of the company as it is common in the conventional economy.

1.1 Why is this Brand so special?

With over 30 years of experience in this industry and millions of satisfied customers, the BAKTAT brand has made a name for itself not only in Germany but also worldwide. How many companies have so much experience in their industry that have been running successfully for years and want to implement projects in the crypto world?

According to various governmental statistics reports, the global food and groceries market is currently valued at nearly $12 trillion (in the year 2019) and it's expected to sustain a CAGR (compound annual growth rate) of 5%. This means that the retail groceries sector is meant to continue thriving and maintaining itself as one of the most profitable industries in the world. While most companies on our level focus exclusively on obtaining more profits, larger market-share and more control, we've decided to use our experience and brain-power to democratize the farming industry and share the profitability amongst those interested in it.

To achieve such an ambitious goal, here are the main elements we plan to build:

Our asset profile includes projects in more than 42 categories which are started all over the world. We plan to plant, grow and sell aloe vera, acai, pineapple, avocados, bananas, cotton, chili, dates, dragon fruit, strawberry, oats, blueberry, raspberry, honey, ginger, jackfruit, currant, coffee, persimmon, rubber, herbs, turmeric, lychee, corn, mango, olives, papaya, passion fruit, pepper, pine nuts, rice, saffron, salep, chocolate, sesame, soy, sunflower seeds, tea, truffle, wheat and more.

All cryptocurrency driven, powered by our own proprietary Ethereum ERC20 token, BAKTAT Germany Token

An integrated participation service solution for users to purchase groceries using either several of the world's most well-known cryptocurrencies (e.g.: BTC, ETH, LTC) or BAKTAT token, which will benefit it's users to give the possibility to participate in the farming of the agricultural fields.

A mobile application for users to manage their account information, promotions, perform online orders and many other different ideas.

A platform for decentralized crowdfunding to power agricultural fields owned by thousands of individual operators all over the world. Users will be able to put down a particular project and request funds from the global community in order to have a wide network of participants taking part in their agricultural fields while counting on BAKTATs 30 years of experience.

To continue our white paper into further detail, we'll review each point separately but before that, we'd like to answer an important question: Why us? How can we achieve such a big mission?

We sure can and here's why:

BAKTAT has been operating for three decades in the retail and wholesale groceries industry. During this time, we have amassed a fortune of experience, contacts, procedures and many more tools that we use on a daily basis to run such a large-scale operation. As of this moment besides our wholesale operation, we're currently operating and investing in Farmlands. In simple words, we're bringing the Bitcoin effect into the farming industry. As a result, we empower our own agricultural fields, allowing ordinary people to join farmland projects through blockchain funding mechanisms and boost the cryptocurrency adoption by allowing its use for the most vital and ordinary products that humans require on a daily basis.

How does it work?

For any cryptocurrency project to succeed, there must be a clear demand for its offering. For example, let’s analyze Ethereum (ETH). The reason ETH is such a successful token is because users require it every time, they are going to use the Ethereum computing network in order to pay for “gas” fees. Many cryptocurrency projects set themselves on ambitious missions, but they forget the importance of having a solid use-case. That’s why we decided to diversify the demand inducing factors across several areas of our project as much as possible to ensure that our token succeeds in the financial markets. Before we get into the mechanics of each one of our different projects, it is important to be clear that BAKTAT Germany Token will power the entire ecosystem and the use case will be the following:

Right now, if you are a digital worker from a non-EU country and you just moved to Germany, getting a bank account will be a tedious and complex process, you’re being discriminated against just because of where you came from. Cryptocurrency puts an end to this problem. BAKTAT Germany Token gives a strong and solid use to cryptocurrencies by allowing regular people to participate in farmland projects regardless of their background while building a strong ecosystem of token-driven farmland platform.

How to become a BAKTAT Farm and Land Profiteer in 6 steps

STEP 1

You start your journey on BAKTAT Farm by acquiring our token, the BAKTAT Germany Token.

STEP 2

Congratulations! Once you have your tokens, you can chose on our platform in which agricultural project or product you want to participate in.

STEP 3

After becoming a BAKTAT Germany Token holder and choosing a project to participate in, you can put your BAKTAT Germany Token inside one of our projects and secure a passive income.

STEP 4

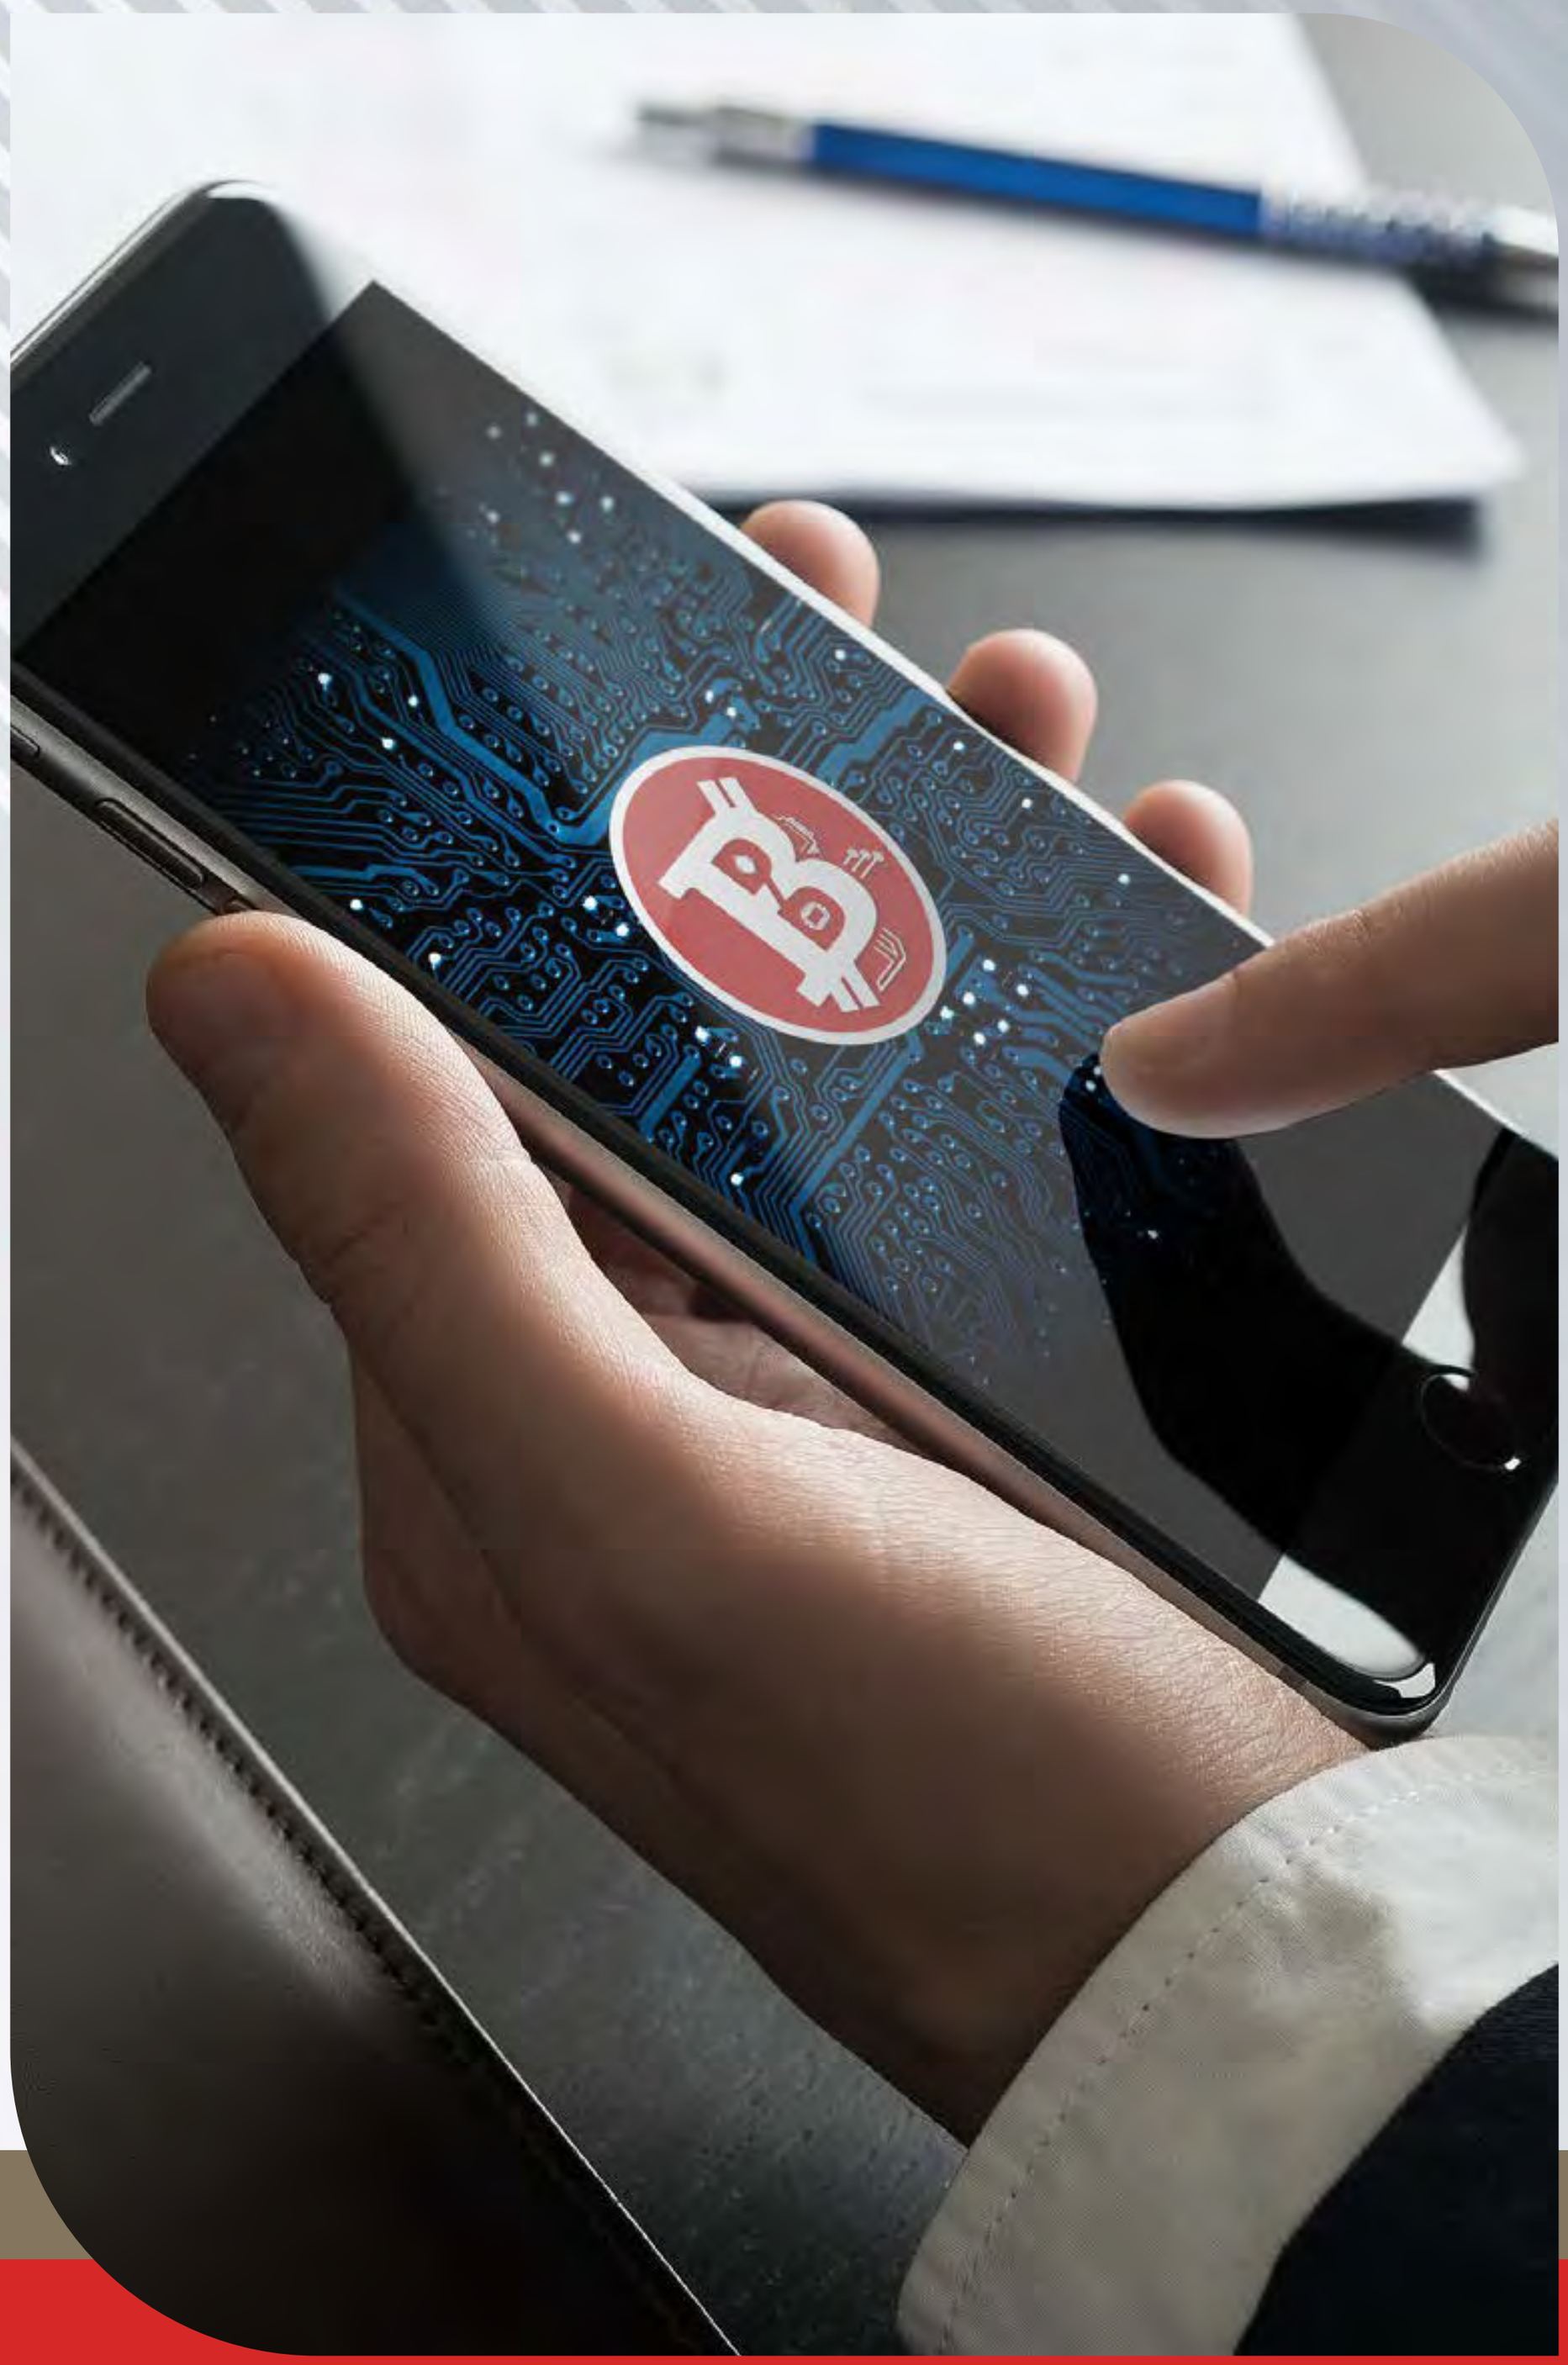
Get your first Farmland shares and put them at stake to receive BAKTAT Germany Tokens. The money gain through sales, will be reused in new projects, plantations and farmland.

STEP 5

With your Token in stake mode, you will receive a percentage of the net profit generated in the chosen project in BAKTAT Germany Token.

STEP 6

Great! If you arrived here and completed all the previous steps, you are a BAKTAT FARM participant. In a simple and sustainable way BAKTAT Farm can generate income in the medium and long term in a solid way for its participants.



BAKTAT’s Mobile Application

Our mobile application will provide the following features:

- Wallet balance management
- Order history management and analytics
- Ability to join future projects.
- Managing your profile, personal data, notifications and addresses
- Interacting with your farmland, joining projects and many other small additions

Baktat Farming is an innovative concept where users can use their crypto assets in order to receive returns from farming land of BAKTAT. If you start with small capital in traditional settings, you may gain a little or nothing in returns due to transaction and swap fees, thus, you may wonder, if there is any different way to turn your small stake into a big reward?

That’s why we are here.

What is Baktat Farming?

BAKTAT uses the benefit of farming by summarizing all the user’s deposited funds into no-loss projects. After harvesting and selling, huge rewards will be provided to our BAKTAT user by an unequal method. That means with a small amount of tokens you can still earn huge rewards just by participating in our over 40 projects and products.

Benefits of Baktat Farming

- No loss on capital
- We manage all the farming process for you (find and acquire farm harvesting, selling)
- You can just sit back and wait for a huge reward
- Even using small amounts of BAKTAT tokens will give the chance to get big rewards
- Using big amounts of BAKTAT Tokens will give a chance to get even larger rewards

2. Challenges

Since the beginning of the Corona pandemic, much of the world has changed rapidly and permanently. The way we communicate, work and move around has changed dramatically and there is currently no end in sight.

Much more serious in the long term is the collapse of the economy, the change in food supply, and our current financial system. All over the world we can hear that supply chains in various areas are interrupted and in some supermarkets even some shelves were already empty.

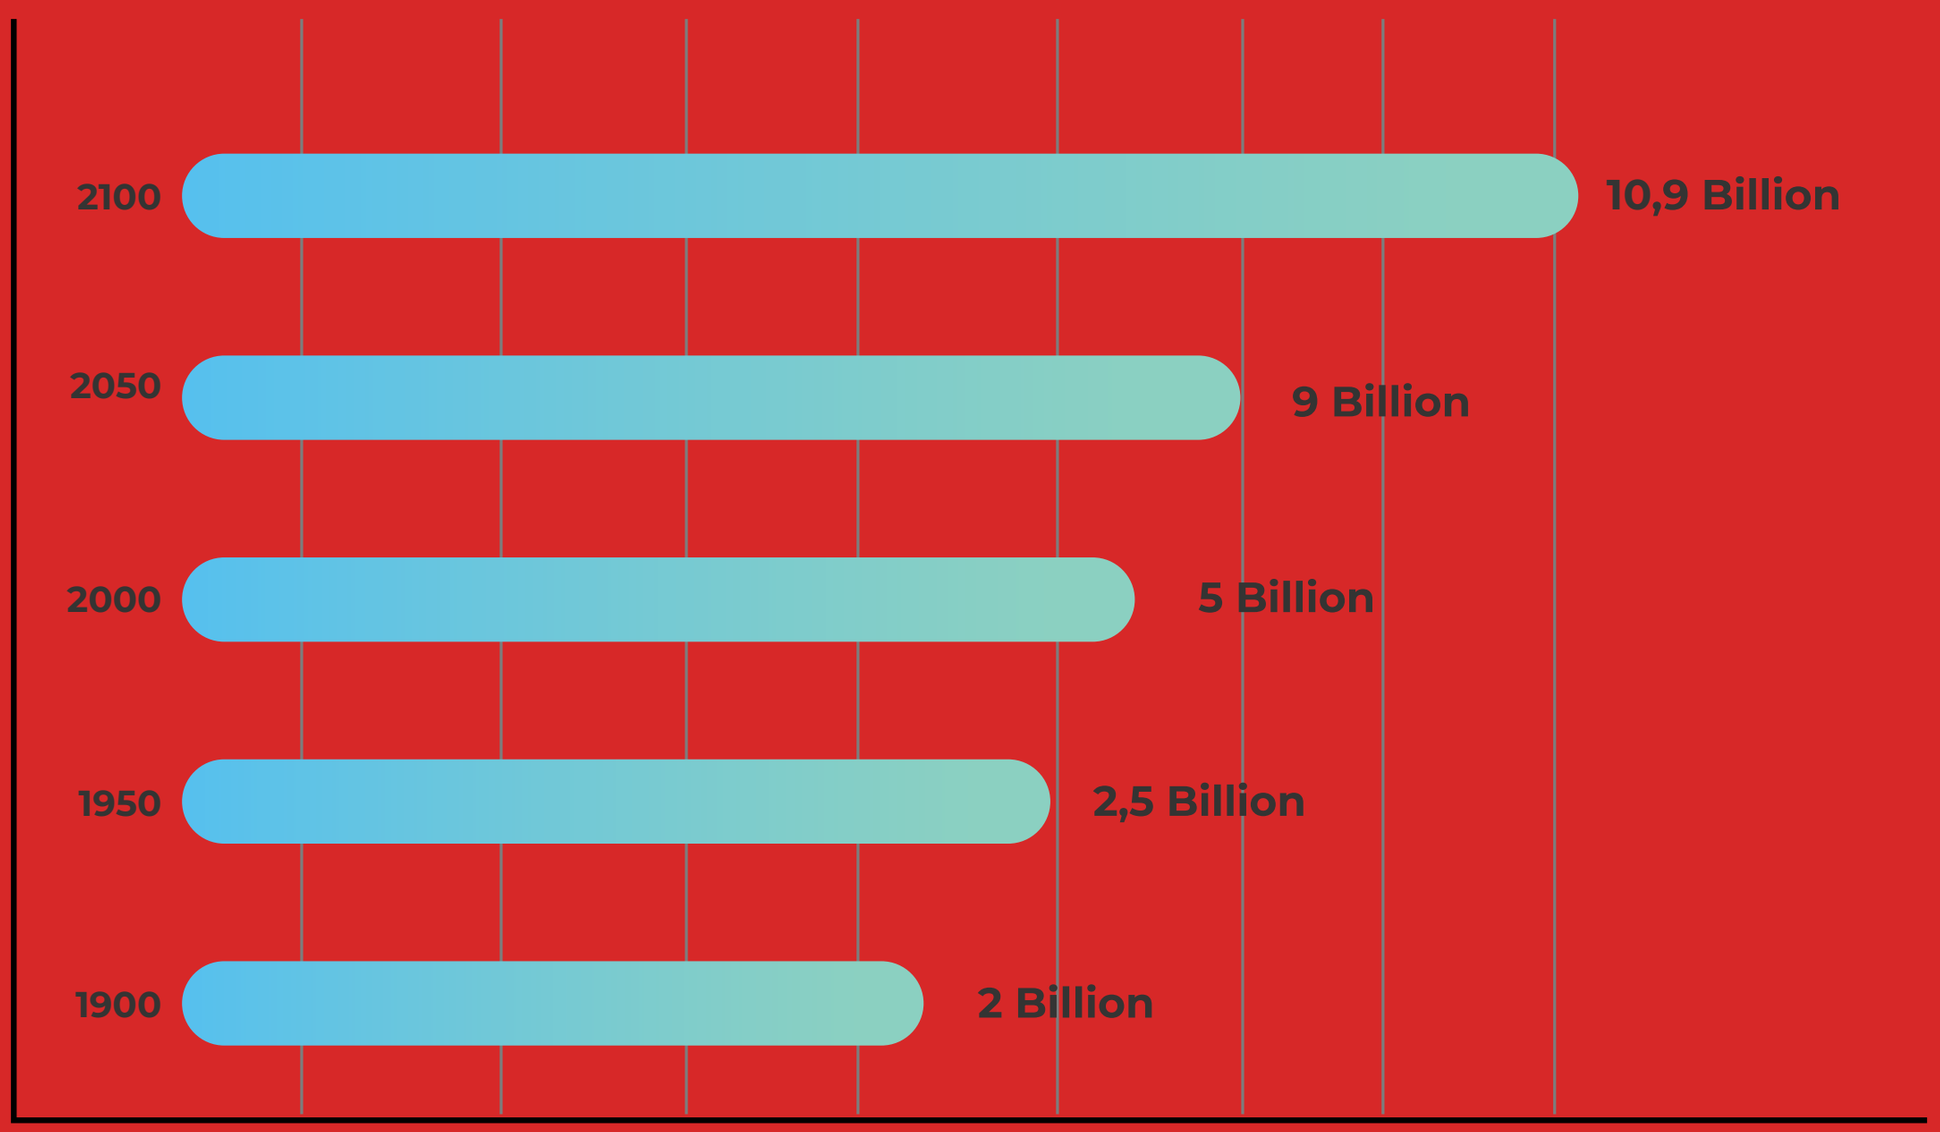
In the course of globalism, more and more subcontractors are entering the food chain, which in the end is most expensive for the producer and the end consumer due to pricing policies.

In terms of finance and the global economy, it doesn't need to be explained to anyone who has spent any time on the internet in the last five years that Bitcoin, and cryptocurrencies in general, are the newest, fastest, and cheapest alternative when it comes to online transactions.

First, the whole project will be launched with crowdfunding and community building to finance and accelerate the construction of the

whole project. It’s a stable market with no big surprises.

Agricultural business is the market that moves and feeds the world, not only that, it moves the markets for research and development, technical assistance, technological innovation and efficient management. Today we are more than 8 billion people, with a forecast of 9.3 billion in 2050. Until then, agriculture, being responsible for feeding the world, will evolve dramatically. Therefore, it will be a safe and reliable market to participate in.



2.1 Why ICO?

There are many arguments why we have chosen to do initial exchange offering instead of alternatives ways to raise money. First, an initial exchange offer not only allows us to onboard participants from different regions but also to incentivize them to promote the project idea in an early stage..

Second, tokens provide liquidity since they can be traded on various exchanges after the ICO. Participants can liquidate their position like holding shares in a publicly listed company. Finally, the tokens' smart contract enables easy transparent payment method which would be hard to process without usage of blockchain technology.

3. Goal and Vision

The aim is to secure the best locations worldwide for the realization of farmland and to obtain the necessary licenses and land and to create an infrastructure with the BAKTAT Germany token which allows not only to participate in all farmland projects with the token but also to earn with the token.

In parallel, already existing farmland is being prepared by the team in the background, which will contain the expertise of the company as well as over 30 years of professional experience of the CEO. This should enable any motivated entrepreneur in the world to get a foot into entrepreneurship with an existing system and participate in its development.

In the short term, the goal is to offer agricultural projects worldwide with up to 20000 hectare land and then in the long term, to up to 80000 hectare land and beyond.

Investors Marketplace

If you own farmland, you can sell 50% of your farmland to us and become partners with us. The net profits are distributed 50:50 with the land owner and BAKTAT. We will take care of the distribution of our share of the profits to all users on our platform. The blockchain technology keeps everything transparent.

4. BAKTAT Germany Token

During the Initial Coin =Offering (ICO), Baktat as a company will issue virtual currency tokens called BAKTAT Token (BAKTAT) on the blockchain operated by a smart contract.

Distribution

The BAKTAT Germany Token is limited to a maximum supply of and is a 100 Mvd Ethereum Chain (ERC20) token. This supply limitation is implemented into the smart contract and cannot be changed or manipulated by BAKTAT or any third party.

Unsold BAKTAT tokens will be burned after the sales phase.

Our main goal is to create long-term user loyalty. Team, Advisor, Partnership, Bounty and Airdrop tokens will be pre-minted to the Binance Smart Chain during the deployment of the smart contract.

Tokens will be distributed as follows:

60% Sale
20% Team
10% Partnership
5% Bounty/Airdrop
3% Advisor
2% Charity

Decentralized Crowdfunding Platform BAKTAT set itself on the vision to not only create profitable international farmland projects but rather to include the community into the process of wealth-value creation. Through BAKTAT's decentralized crowdfunding platform, users will be able to participate in the creation of new farmland while banking on the experience of over three decades accumulated by BAKTAT.

Components

- Farmland management, where they will be able to scan for current or new projects where capital deployment is required.
- In-depth analytics to monitor expenses, profitability and many other characteristics.
- Community area for exchanging information and cooperating with other farmland participants.
- Resources center where users will be able to access BAKTAT’s manuals and procedures.

These are barely a few of the features planned for BAKTAT’s dashboard as it will require a full farmland management solution, product databases and many other requirements to operate all our systems via blockchain

5. TOKEN Sale

60% of the total tokens allocated to the sale can be divided into private sale and crowdsale. Participation in the private sale requires a minimum purchase of tokens worth 10,000 €. Upon conclusion of the private sale, the crowdsale commences.

5.1 Successful private sale participation

Token holders who acquired their tokens within the phase of the private sale, must go through the KYC (know your customer) process.

5.2 Successful crowdsale participation

Must go through the KYC (Know Your Customer) process. Tra the Exchange

5.3 Information on the distribution and full access to the token

The token are Distributed after the ICO.

Furthermore, the token must be tradeable on an exchange

Distribution of returns

The total return of each project is 60% of the projects net profit. Your personal profit depends on the amount of shares you hold of that specific project.

The distribution of returns depends on the harvest time and the sale of the product. For some products, the sale is delayed due to possible strategic holding back of the product in order to achieve higher revenues. All costs of the project are deducted from the initial revenue.

7. BAKTAT VALUE

The BAKTAT Germany token can be used as a participation system for nearly 50 products after the ICO. The demand for the BAKTAT Germany token will increase with the growing popularity of the community, as the Germany token will also offer users an investment plan and strategies on their farmland.

More detailed information will be published Q3 2023

BAKTAT is here to bring the Bitcoin effect into farmland by democratizing projects, making them more transparent and giving the benefit of ownership to regular individuals interested in starting their own farmland in our virtual platform. Cryptocurrency brings the possibility to anyone to become a part of something great and in this case, of making something ordinary, extraordinary. Once BAKTAT has achieved its main objectives, we'll be counting on 20000 hectare land, all cryptocurrency driven and at least 100000 user-owned farmland operating seamlessly across a web / mobile platform that brings the best of blockchain technology into the ordinary tasks of every day. If you want to become a part of something great, join our quest to democratize groceries and help us achieve an outstanding mission.

9. Funds usage

- Approximately 20% will be used for marketing and branding in order to attract potential customers to BAKTAT.io. Focus will be put on crypto YouTubers and crypto enthusiast worldwide.
- Approximately 60% of the funds reised will be used to Program the platform

- Approximately 10% will be reserved for legal needs such as any required international legal adjustments or license purchases.

- Approximately 10% shall be kept as a reserve to respond to any challenge which might come up.

10.NFT

Will be updated as soon as possible

Demo Account / BETA Testing phase

We plan to launch a demo version of our platform in the fourth quarter of 2023. Registered users will then be able to explore the platform in an open beta phase and participate in various sample projects. The sample projects consist of multiple agricultural opportunities with individual characteristics and varieties. Use and growth potential are virtually represented. The official launch of the beta phase will be announced on the homepage in due time.

BAKTAT Agrar Academy

In the Baktat Agricultural Academy all information is collected. Such as the description, characteristics, economic importance, varieties, nutritional values and composition, health effects and medicinal uses, ecology, trade and statistics, and use in various fields.

Transparency

We achieve transparency through GPS coordinates of the agricultural fields/farmland. With one click, anyone can view the fields on google maps. Progress can be checked through regular drone inspections for prject shareholders.

Projects we Support

We strive for cooperations with ministries and municipalities not only to create jobs in the respective countries but also to have long-term ties with the local authorities.

Bill and Melinda Gates foundation
WWF
Greenpeace
And many more

12. Amendments

We would like to emphasize at this point that all numbers and models mentioned so far are to be regarded as such - models. The final structure of the costs can only be determined in the course of time. We, therefore reserve the right to adjust the cost structure. These adjustments will be communicated as early as possible.

13. Afterword

We are working with full vigor to make this vision reality. We cannot predict events, such as legal changes or financial and technical specifications, which are about to happen. We do our best to implement everything as described in this whitepaper. However, we reserve the right to make certain adjustments if necessary. These possible adjustments will always be made in the interests of the community, the users, token holders and current jurisprudence. Thank you for your understanding

14. Founder

Chief Executive Officer and Founder

Özgür Baklan our founder and CEO was born on February 12, 1979, in Mannheim, Germany.

At the age of 18 he had already taken on a lot of responsibility in the family business and managed 20 million DM (today 10 million Euro) annually.

Within 2 years he increased the turnover of the family business in the area of distribution to 65 million DM (today 32.5 million euro).

At the age of 22, he developed the idea of selling BAKTAT products in the ethnic market (Helal). He implemented the idea with cooperation partners and founded the “Back-frisch GmbH”.

At 23, he was responsible for building the Uludag brand in Europe.

At the age of 27, he separated from the family business and built up the Abone supermarkets.

In the first year he started with a turnover of 4 million euros.

Within 3 years he achieved 100% increase in sales.

The total turnover has remained stable until today.

At the age of 30 he built in parallel the most modern children indoor park with an area of 4400 square meters. Pinocchio Mannheim.This includes special attractions that were built and exhibited for the first time in Germany, such as the first indoor high ropes course and the first helicopter monorail.

In the same year he receives the award “Entrepreneur of the Year 2010” from the Turkish Entrepreneurs Association as the youngest entrepreneur of Turkish origin.

Özgür has been trading in Bitcoin and Cryptorcurrencies since 2016.

In 2017, he and his family took over the BAKTAT brand in Germany and produced 580 different products within 6 months.

Labeled produced and In STOCK.

Since 2020 he is also a certified options trader.

17. Why charity is important?

Helping

The main goal of charity from the beginning was to help people. By donating your money to non-profitable organizations you can save the life of a human being, historic building, animal or even the whole species. Every single donation will be important — both big and small.

Our Charity

Özgür Baklan has been supporting abused orphans and street children in Africa for over 15 years. Since he lost his father at the age of 13, it is especially important to him to help children in this situation not only financially but also emotionally.

Therefore, he founded villages with their own ecosystem where not only independent farming is taught but also schools for children are available. Today, more than 1000 people live in these villages, 400 of them are orphans, most of them 3-8 years old.
